Explanation of the Figures above

The first column contains the figures from the current poll.

The Second column is how many seats would be won for each each party based on a swing from the 2016 General Election (with regional polling being used weighted to the national poll average).

The third column is the result of the combination results in Column 2 "adjusted for luck" – essentially taking the total number of constituencies the party was last in, and also runner-up, and then "adjusting" the result based on an equal distribution of luck.

"Left" refers to the figures for Solidarity-People Before Profit and Independents For Change.

Regional Figures

	Dublin		Leinster		Munster		Connaught-Ulster	
Fianna Fail	20%	+5	27%	-1	30%	+4	30%	+4
Fine Gael	35%	+12	34%	+8	29%	+3	34%	+5
Labour	7%	-2	5%	-2	5%	-2	3%	nc
Sinn Fein	16%	+2	19%	+4	15%	+4	17%	+1
Others	22%	-17	15%	-9	21%	-9	16%	-9

Regional Figures are calculated by useing regional sub-samples from the five opinion polls from which they are available, and then calibrating the national figures in those polls against the national figure in the current poll.
Adjusting for "luck"

After all the constituency counts have been calculated, the number of constituencies where a party was last elected and where they were runner-up are totted up, and the overall figure is then adjusted to show the overall figure if there had been an equal distribution of "luck".

GE2016 Swing

	FF	FG	LAB	SF	OTH
Total	47	61	1	29	20
Last	4	6		4	10
Runner-Up	7	7	3	3	4
	48	61	3	29	17

Poll "Bounce"

The five polls taken in the last week - taken as an average - before the General Election in February 2011 were slightly off . In 2016 both Fine Gael and Sinn Fein were over-estimated in the last five polls released on the final weekend of the campaign. The poll averages and the results are shown below :

2011	FF	FG	LAB	SF	Others
Poll Averages	15.6	38.2	18.8	11.2	16.2
GE Result	17.4	36.1	19.5	10	17
Difference	*+1.8*	*-2.1*	*+0.7*	*-1.2*	*+0.8*

2016	FF	FG	LAB	SF	Others
Poll Averages	21.2	28.8	6.2	16	27.8
GE Result	24.3	25.5	6.6	13.8	29.8
Difference	*+3.1*	*-3.3*	*+0.4*	*-2.2*	*+2*

In both 2011 and 2016, Fianna Fail support was under-estimated in the exit polls conducting during polling. The polls and the results are shown below :

2011	FF	FG	LAB	SF	Others
Exit Poll	15.1	36.1	20	10.1	18.7
GE Result	17.4	36.1	19.5	10	17
Difference	*+2.3*		*-0.5*	*-0.1*	*-1.7*

| 2016	FF	FG	LAB	SF	Others
Exit Polls	22	25.4	7.5	15.5	29.6
GE Result	24.3	25.5	6.6	13.8	29.8
Difference	*+2.3*	*+0.1*	*-0.9*	*-1.7*	*-0.2*

Caveat!!

The following figures are NOT predictions of what WILL happen.

They are merely calculations of what probably WOULD happen IF the likely regional swings based upon the Poll Figures being analysed above are applied equally to each constituency.

What Ireland Might Look Like Under a First Past The Post System

First Past The Post is the electoral system used in the UK – quite simply, the highest poller wins the seat in each constituency. Each FPTP "constituency" is derived from a Dail constituemcy (i.e. there are five FPTP constituencies within the boundaries of the Donegal Dail constituencies), and support figures are derived from tallies in the majority of cases (and educated guestimates where tallies are not available) – all calibrated to the current poll.
